$210,520 Grant For Research Awarded

WASHINGTON, DC - U.S. Congressman Mike Pence has announced that the Department of Health and Human Services has awarded Ball State University with a $210,520 grant for "Diabetes, Endocrinology and Metabolic Research:"

"I want to commend Ball State University on earning this grant award for neurological research," Pence said.

"This substantial grant award is a testament to the efforts of the faculty and staff as well as the national reputation of Ball State University in the area of scientific research."

Background:

The grant project is entitled: "Neuroprotective effects of brain glycogen in hypoglycemia" and will be funded for three years starting July 20, 2009.
